Labelling and Safety Solutions

Machine Guarding – SAFETY SYSTEMS

Our machine guarding and safety systems are tailored exactly for you.

Personnel must be protected from working machinery – machine guarding by SATECH will make sure you meet all your obligations under the European Directives on the Safety of Machines. All safety equipment is designed and manufactured to Machinery Directive 2006/42/CE.

Our SATECH machine guarding systems offer an unbeatable, world-class partnership. With a solution for every application, each bespoke installation is designed by our experts to deliver the precise level of protection your processes demand.

- **BASIC**

The basic system consists of 40x40 uprights and 20x20 panels with 20x20 frames, connected by screws or SATECH patented fast assembly clamps. It is the standard method used in all guards for plant and machinery.

- **STRONG/HEAVY**

Designed for use in heavier applications such as industrial robotics or the steel industry, this protection and accident prevention system consists of 60x60 uprights and 20x20 or 30x30 panels with frames connected by screws or SATECH patented fast-assembly clamps.

- **GREEN FAST**

Fully compatible with other SATECH systems, the Green Fast protection system has been designed for strength with easy, fast assembly, and a wide. range of height adjustment – all at low cost.

The SATECH Green Fast patented protection system without uprights is designed for extra-fast assembly. Featuring self-supporting panels with 30x30 frames that fasten to the floor and each other, it also has baseplates with locking fork and upper flexible coupling.

- **MDF**

An innovative and economical solution, MDF combines the 40x40 posts with a frameless, specially-shaped mesh panel and is designed for quick and easy assembly.

- **ADAPTA**

The new modular ADAPTA system combines both the practicality of the MDF system and the robustness of the STRONG/HEAVY system. It is an ideal solution where there is a high risk of mechanical impact.
