RackNets™

Dynamic Safety System

GRIPPLE

Accept No Alternative – Recommend and Supply with Confidence

Not all back-of-rack safety systems are the same. Installing an inferior rack netting or steel mesh solution puts warehouse personnel and valuable stock at serious risk – your customers need to be aware of this. This is why we recommend the **RackNets™ Dynamic Safety System**, incorporating the exclusive **Gripple® D6 Dynamic Lockable Plus**.

1 Dynamic System – 5 Components of Safety

RackNets™ is the only back-of-rack safety system that is made up of **five**, specifically engineered components designed to work as one dynamic system – to safely contain and restrain a dynamic load.

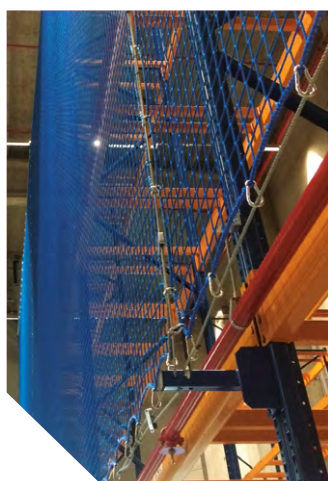

No other back-of-rack system can do this.

Successfully Third-Party Tested, Certified and Proven

This British-made product is the best solution available on the market today for preventing product fall-out and minimising risk from falling loads within the warehouse. Maximum operational efficiency is ensured and return on investment is strong.

The RackNets™ system is trusted by warehouse operators throughout the UK, with Warehouse Partners having so far, supplied more than 300km of the netting to its trade customers.

- Fit and protect – robust and made to last, requiring minimal maintenance.
- Available in a range of colours for coordination in the warehouse.

1

Safety Netting

2.3, 3.0 or 5mm gauge netting is specified for back-of-rack applications. This is **manufactured off-site to your customers' exact requirements, keeping installation time to a minimum.** The nets are robust and have inherent elasticity that helps to decelerate any load pushed against it. Available in a range of colours for coordination with the warehouse.

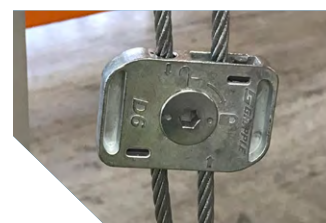

2

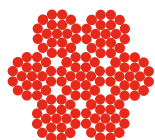

Gripple® D6 Dynamic Lockable Plus

Designed exclusively for RackNets™, the **Gripple® D6 Dynamic Lockable Plus** secures the wire cable between two fixed points and will not fail under tension caused by a dynamic load. Independently **tested and certified by Lloyds British**, the system will safely contain and restrain a dynamic 1000kg pallet load.

3

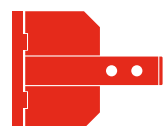

Wire Cable

The wire cables used within the system are fully-tested and constructed using a central core. They are manufactured with a galvanised coating in accordance with the norm EN 12385. **Unlike other systems, it will not break, even under maximum stress.**

4

Bracket

Manufactured by Warehouse Partners exclusively for the RackNets™ system, these heavy-duty brackets are attached to racking uprights at the four corners of the installation, **playing a crucial part in safely securing the perimeters of the entire system.**

5

Karabiner

Karabiners with 9mm clearance are used to attach the net to the wire rope at key points, both laterally and vertically to **ensure the integrity of the entire system remains intact.**
