Kingspan – SafeDefence Barrier Protection Systems KPSDouble Barrier-S – Crash Barrier

The unique anchoring system used for KPSDouble Barrier-S offers ultimate high-level protection for columns and walls, while also allowing fast installation and no damage to concrete upon impact.

KPSDoubleBarrier-S can also be used as a wheel guide to help guide drivers reversing articulated trailers to dock leveller door for loading or offloading purposes. Manufactured from high-performance synthetic polymer technology, its durable design provides excellent impact resistance and ensures maximum protection at higher levels compared to KPSBarrier-S.

Kingspan SafeDefence Barrier Protection Systems

SafeDefence Barrier Protection Systems consist of high-performance, high-density polyethylene around a metal support, tested and certified to provide protection to people and structures from the impact of machinery.

All of the SafeDefence Barrier Protection Systems are manufactured from a high performance synthetic polymer to provide maximum impact resistance and, as they are self-coloured as opposed to painted, they offer superior resistance to UV rays.

Testing

The University of Engineering and Architecture of Zaragoza, Spain, undertook a crash test with Kingspan Barrier Protection Systems to analyse the energy supported by the products and their impact resistance behaviour. Test results indicate that Kingspan Barrier Protection Systems products offer better impact protection than all others on the market due to their resistance and elasticity.

Materials

All products are located and installed independent of the elements to be protected, removing the risk of damage from impact transmission.

Hygienic and easy clean, low maintenance and carrying food-quality certification, these high-density polyethylene protective barrier systems are especially suitable for the agri-food industry.
