

Fully adjustable and bespoke, our ToppleNets™ solutions are the best risk reduction system on the market for safely containing and restraining unracked loads and ground-stored pallets. The strong 5mm gauge netting forms a protective barrier that secures loads in the event of accidental impacts or toppling, helping protect personnel and stock in areas where free-standing products are block-stacked and where awkward items such as kegs are capable of toppling/becoming dislodged.

— Featuring Dynamic Locking Gripple® technology

There is more to a safety netting system than just the net! All our ToppleNets™ feature the tried-and-tested **Gripple® D6 Dynamic Lockable Plus**. This proven device secures the wire fixing/loading cable between fixed points and will not fail under tension caused by a dynamic load. It has been independently tested and certified by Lloyds British.

— Made bespoke to suit your customers exacting safety requirements

Keep block-stacked goods safe and separate from defined aisles and large, high traffic areas both inside the warehouse and out. We fabricate posts that frame and firmly anchor **ToppleNets™** in small to mid-size areas to your specification, or they can be attached to ceilings to protect longer/higher areas and walkways.

— Robust, long-lasting and good looking protection

Each ToppleNets™ solution features our 5mm gauge netting that is proven to contain and restrain pallet loads up to 1,000kg and exclusively used in our **RackNets™** solution. The inherent elasticity of the netting helps to safely decelerate any load pushed against it. Rugged and made to last, our netting requires minimal maintenance and is available in a range of colours for coordination with any warehouse.

— Blockstack Collapse

Provides important and potentially life-saving safety where blockstacking is used. Prevents damage, saves lives and ensures unhindered operations.

— Keg Storage

Designed to safely restrain falling kegs – where kegs are stacked high there is always the potential for the containers to become dislodged and fall.

— Aisles & Walkways

Help to ensure clearly defined aisles and walkways within busy footfall and high traffic MHE areas. Provides a safer working environment by protecting pedestrians and operators alike from falling stock.

— Bespoke requirements

Contact us today, we have adaptable ToppleNets™ solutions that will suit your customers requirements.

Please note that the net safety system we have designed is a risk reduction system and cannot be tested for the multiple impacts that can occur in the various conditions that can be created. We cannot therefore guarantee that the system will fully stop products in all situations. For safety without compromise, it is vitally important that any solution is always used in conjunction with a suitable Safe System of Work.

“Our vision is to be the supplier of choice for warehouse and industrial identification, safety systems and associated products, offering clients a quality-driven, total solution via multi-channel procurement methods.”

Tony Gresty
Managing Director – Warehouse Partners

Labelling and Warehouse Solutions to reduce time and costs

Products available:

- Location labels, aisle markers and identification products
- RackNets™ safety netting and other safety netting products
- Warehouse safety products including safety signs and barriers, right through to floor and line marking solutions
- Label holders to provide a range of ID solutions for shelving
- Load notice signs (SEMA signs)
- Pallite® Pix® picking solutions
- Machine guarding
- Mesh partitioning and security fencing
